                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
Cells producing antibody compositions including antibody fragments and fusion proteins with Fc domain of antibody, useful for prevention or treatment of cancer, immune diseases, circulatory diseases and
                                                                                                                                                                                                                                                   accompanying tumour, allergy or inflammation, autoimmune diseases, circultatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other drugs for therapy. The present sequence represents a protein molecule used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MRAWIGSWRWIMLILFAWGTLLFYIGGHLVRDNDHPDHSSRELSKILAKLERLKQQNEDL

The produced antibody compositions are drugs for prevention or treatment of diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MRAWTGSWRWIMLILFAWGTLLFYIGGHLVRDNDHPDHSSRELSKILAKLERLKQQNEDL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (CHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompositions are drugs for prevention or treatment of diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety anceduced side effects when applied alone or in combination with other molecule used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MRAWIGSWRWIMLILFAWGILLFYIGGHLVRDNDHPDHSSRELSKILAKLERLKQQNEDL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW22124 and AAW22125 represent the pig and human alpha 1-6 fucosyltransferaes of the invention, respectively. The enzyme transfers fucose from guanosine diphosphate to the 6-hydroxyl group of the GLCNAC nearest to R in the receptor molecule: (GLCNACbeta 1-2Manalpha 1-6) GGLCNACbeta 1-2Manalpha 1-3) Manbeta 1-4GLCNACbeta 1-2Manalpha 1-6) GGLCNACbeta 1-2Manalpha 1-6) GGLCNACbeta 1-4GLCNAC-R 1-4GLCNACbeta 1-4 (Fucalpha 1-6) GLCNAC-R. It has an optimum ph of about 7.0 (pig) or 7.5 (human), and is stable over the ph range 4-10 after 5 hours at 4 degrees C. The optimum working temperature of the alpha 1-6 fucosyltransferases is 30-37 degrees C. A bivalent metal is not required for activity of the enzyme, and the enzyme is not inhibited

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                    The invention relates to a plant cell with an animal type sugar chain adding function, created by transforming a tobacco cell with a gene encoding an enzyme derived from an animal which can transfer a fucose residue to the reductive end acetylglucosamine residue of a sugar chain. The gene that is introduced into the plant cell encodes the enzyme alphal, 6-fucosyl transferase. The method of the invention is useful for the preparation of a glycoprotein having animal type sugar chain. The current sequence represents alphal, 6-fucosyl transferase amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MRPWTGSWRWIMLILFAWGTLLFYIGGHLVRDNDHPDHSSRELSKILAKLERLKQQNEDL

Lucosyltransferases of the invention, respectively. The enzyme transfers fucosyltransferases of the invention, respectively. The enzyme transfers fucosyltransferases of the invention, respectively. The enzyme transfers fucosyltransferases of the invention, respectively. The enzyme transfers concerned against and against a followable for the 6-hydroxyl group of the GlcNAccern areases 1-2Manalpha 1-6) [GlcNAcbeta 1-2Manalpha 1-6] [GlcNAcbeta 1-4GlcNAc-R 1 thas an optimum ph of about 1-4GlcNAcbeta 1-4 [Fucalpha 1-6) [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has an useful in the synthesis and 1-6 [GlcNAc-R. It has an optimum ph of about 1-6 [GlcNAc-R. It has 1-6 [GlcNAc-

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing

Additionally, N may be used to produce the colon cancer-associated Ps, Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.

                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                         fucosyltransferase (alpha 1-6 fuct, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fuct by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fuct antibody can be used for immunoassay. The present sequence represents the human alpha 1-6 fuct protein of residues 237 to 575, which is used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention i useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention signistrations in higher eukaryotes for the development of discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 379 IEEYMVHVEEHFQLLERRMKVDKKRVYLATDDPSLLKEAKTKYSNYEFISDNSISWSAGL

                                                                                                                                                                                                                                                                                                                                                                                                                                                fucceyltransferase (alpha 1-6 fuct, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fuct by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The present sequence represents the human alpha 1-6 fuct methody can be used for immunoassay. The present to sequence represents the human alpha 1-6 fuct protein of residues 343 to 575, which is used in an example from the present invention.

The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which human liver single exon encoded peptides of the invention.

Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 EVKDKOVVELPIYDSLHPRPPYLPLAVPEDLADRLVRVHGDPAVWWVSQFVKYLIRPQ

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  280 EVKDKAVQVVELPIVDSLHPRPPYLPLAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ
                                                                                                                                                                                                                             Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                     Peptide #1491 encoded by human foetal liver single exon probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 27; SEQ ID NO 26620; 639pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for expression analysis is useful for gene the toxicity of chemical expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            280 EVKDKNVQVVELPIVDSLHPRPPYLPLAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ 339

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21355-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

hypertension, cardiac arrhythmias and congenital heart disease, specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimar's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Steed, Paul M.
APPLICANT: Lasala, Daniel J.
TITLE OF INVENTION: Amino Acid Sequence of Human PLD2A
Patent No. 6187559
FILE REFERENCE: 4-30148/PI/CGC1954/R
CURRENT APPLICATION NUMBER: US/09/141,206
CURRENT FILING DATE: 1998-08-27
EARLIER PILING DATE: 1997-08-28
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 2
LENGTH: 933
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              491 HSLDDIYYFGGQNAHNQIAVYP 512
